CERTIFICATE OF COMPLIANCE

TO: To Whom It May Concern

SUBJECT: HOYA Safety Prescription Eyewear Frames

This is to certify that all Safety Prescription Eyewear Frames, provided by HOYA, have been tested to and meet the requirements of the ANSI Z87.1-2010 Standard. This is the case regardless of the brand name and is verified by the frame marking of Z87-2+. HOYA is in the process of switching from 3M branded frames to PENTAX branded frames. Both brands are covered under this compliance certification.

NOTICE: The ultimate level of protection for Safety Prescription Spectacles depends, not only on the frame, but on the prescription lenses and the frame as a complete protection system. The material, processing and insertion of the prescription lenses into a compliant frame can either complement or degrade the level of protection. Refer to the lens monogram to determine the suitability of Safety Prescription Spectacles for each specific workplace hazard. Only lenses marked "+" provide impact protection.

It is the responsibility of the factory owner or safety director to conduct a hazard assessment for the workplace and determine the appropriate eyewear protection required for each job.

Dana R. Dixon; Global Marketing Manager
